Cell-Mediated Immunity In Ruminants

Synopsis

Within the last 10 years, the immune system of ruminants, especially T cells and their interactions with other cells, has been an important topic of study for veterinary immunologists and an area of interest for medical and fundamental immunologists. This book brings together all the latest data on ruminant cell-mediated immunology. In the first half of the book, leukocytes and their membrane molecules and cytokines are reviewed. Markers, tissue distribution, functional characterization, ontogeny, cytokines, and histocompatibility are covered in depth in separate chapters. In the second half of the book, cell-mediated immune responses against infectious diseases such as East Coast fever, infectious bovine rhinotracheitis, foot and mouth disease, maedi-visna, and gastrointestinal nematodes are analyzed. The application of cytokines to ruminants against infectious diseases is also reviewed.

Book Information

Hardcover: 256 pages

Publisher: CRC Press; 1 edition (February 28, 1994)

Language: English

ISBN-10: 0849349524

ISBN-13: 978-0849349522

Product Dimensions: 0.5 x 7.5 x 10.5 inches

Shipping Weight: 1.8 pounds (View shipping rates and policies)
