Filoviruses: A Compendium Of 40 Years Of Epidemiological, Clinical, And Laboratory Studies (Archives Of Virology. Supplementa)

Synopsis

This is the first comprehensive review of the world literature on filovirus research and provides the most extensive bibliography of the subject yet published. There is special emphasis on foreign literature that has never been summarized. Every aspect of filovirus research, including their history, epidemiology, clinical picture, pathology, molecular biology, and political aspects are reviewed in detail.

Book Information

Series: Archives of Virology. Supplementa (Book 20)

Hardcover: 413 pages

Publisher: Springer; 2008 edition (May 23, 2008)

Language: English

ISBN-10: 3211206701

ISBN-13: 978-3211206706

Product Dimensions: 1 x 8.2 x 10.8 inches

Shipping Weight: 3.6 pounds (View shipping rates and policies)

Customer Reviews

The filoviruses (Lake Victoria marburgvirus and ebolaviruses) are etiological agents of severe hemorrhagic fevers with extraordinary high case-fatality rates for humans, chimpanzees, gorillas, and probably other animals. Many institutions and experts consider them as potential threats to humanity because they could be used as biological weapons. This book summarizes in detail the contemporary knowledge of filoviruses and diseases they cause. Almost the entirety of the open literature on filoviruses, covering all major scientific and clinical fields, is referenced and summarized in this text, including most of the conference abstracts, book chapters, dissertations, government reports, patents, theses, and journal publications in many languages. The book will provide a robust source of knowledge for filovirologists, virologists and scientists in general, clinicians, students, journalists, and biodefense professionals.
